Social Technology Bureau Inventory Portal

I. INTRODUCTION

The Social Technology Bureau Service Request System was developed to modernize and improve the existing ticketing system of the Social Technology Bureau (STB). While an earlier ticketing system was already in place, it had become outdated due to limitations in functionality, user experience, and compatibility with the Bureau's evolving operational requirements. These limitations affected the efficiency of processing technical assistance requests and hindered effective monitoring and reporting.

The previous system no longer adequately supported the increasing volume and complexity of requests, such as technical assistance for STB-deployed programs, program development, knowledge products, consultations, and meeting requests. Users encountered challenges tracking request status, while administrators experienced difficulties managing workflows, monitoring service delivery, generating reports, and maintaining up-to-date records.

To address these challenges, the STB Ticketing System was redesigned and redeveloped as a modern, web-based platform that incorporates improved workflows, enhanced user interface and user experience (UI/UX), automated notifications, real-time status tracking, and comprehensive reporting capabilities. The new system enables stakeholders to conveniently submit and monitor service requests while providing authorized STB personnel with efficient tools to review, assign, process, and resolve tickets. By replacing the outdated platform with a more robust and scalable solution, the Service Request System enhances operational efficiency, improves transparency and accountability, and supports the Bureau's commitment to delivering timely and quality technical assistance to its stakeholders.

Context Diagram

The Social Technology Bureau Service Request System (STBSRS) serves as a centralized platform for managing and monitoring technical assistance and service requests submitted to the Social Technology Bureau (STB). The system enables stakeholders to create tickets without registering an account by submitting the required request information. Upon submission, a One-Time Password (OTP) is sent to the user's registered email address to verify the request before a unique Ticket Reference Number is generated. For existing requests, users can search using their Ticket Reference Number and verify their identity through another OTP to securely access their ticket details, including status updates, resolution remarks, and supporting attachments.

On the administrative side, authorized personnel manage ticket review, assignment, status updates, resolutions, and document attachments through the Ticket Management module. The system also provides automated email notifications, activity logging, and reporting capabilities to support efficient monitoring and performance evaluation. Overall, the STB Service Request System streamlines the entire technical assistance process by improving accessibility, strengthening security through OTP verification, enhancing transparency, and providing a more efficient mechanism for managing and resolving stakeholder concerns.

II. SYSTEM PROFILE

Title:	STB Service Request System
Description:	The Social Technology Bureau Service Request System (STBSRS) serves as a centralized digital platform that streamlines the management of technical assistance and service requests. It enhances service delivery, improves transparency, and supports DSWD's digital transformation initiatives by replacing the existing outdated ticketing system with a modern, integrated, and efficient solution.
Status:	The Service Request System (STBSRS) is currently in the development phase, where system modules are being designed, developed, and tested to ensure compliance with the Bureau's operational requirements before deployment to the production environment.
Training/Development server:	Configured with a Laravel-based back-end and Vite-powered front-end in a local development environment. The server supports API-ready integration, local database connectivity, debugging, testing, email notification services, OTP verification, and front-end hot-reload for development and internal testing purposes.
Production Server:	Configured with a Laravel-based back-end and Vite-built front-end in a production environment. The server is API-ready, connected to the production database, secured for live access, supports email notification and OTP services, and is optimized for stable application performance, reliability, and continuous service availability.
Development Strategy:	The development strategy follows an agile and iterative approach involving system developers, technical personnel, and STB focal persons to facilitate requirements validation, feature enhancement, testing, user acceptance, monitoring, and continuous system improvement.
Computing Scheme:	The system utilizes an internet-based computing scheme, allowing stakeholders and authorized STB personnel to

securely access the application online for ticket submission, OTP verification, ticket monitoring, administrative processing, and reporting.

Inputs:

A. Requestor Information:

The User Information section stores the details of requestors submitting service requests through the STB Service Request System (STBSRS). The information provided is used to identify the requestor and is automatically linked to the corresponding ticket for tracking, communication, and record-keeping purposes.

Submit Feedback & View Doc

Your feedback helps us improve our services.

Process:

The STB Service Request System (STBSRS) is a web-based platform that streamlines the submission, processing, and monitoring of service requests to the Social Technology Bureau (STB). Requestors can create a new ticket by providing the required information and verifying their email address through a One-Time Password (OTP). Once verified, a Ticket Reference Number is generated, and the request is automatically forwarded to the Service Request Administrator for review and acknowledgment. The administrator processes the request, prepares the necessary resolution, and uploads the corresponding output documents. When the request has been resolved, the system notifies the requestor via email, allowing them to view and download the resolution after submitting a satisfaction feedback report. If the requestor is satisfied, the ticket is marked as completed. Otherwise, the ticket may be returned for further action. Tickets that remain unanswered by the requestor for three (3) days after resolution are automatically closed by the system.

Outputs:

A. Ticket Details

The Ticket Details section allows the requestor to view the complete information of their submitted service request, including the current ticket status, request details, conversation with the assigned technical staff, resolution and supporting attachments, and the satisfaction feedback form once the request has been resolved.

1 day remaining

B. Dashboard

The Dashboard module provides an overview of service request analytics, displaying key metrics, ticket statuses, request trends, and other statistical information to help monitor and evaluate the overall performance of the STB Service Request System (STBSRS).

C. Feedback Report

The Feedback Report module provides analytics and summaries of satisfaction feedback submitted by requestors. It displays ratings, comments, and overall feedback trends to help evaluate service quality and identify areas for improvement.

Access Control List:

ROLES	MODULE	ACCESS
Requestor	Home Page, All Tickets Preview Page, Ticket Page	Add and Edit
Service Administrator	Dashboard, FeedBack Report, All Tickets, For Review Tickets, User Management	Add, Edit and Delete

Software Server Requirement Specifications:

- Operating System: Windows Server 2019 or later, Ubuntu Server 20.04 LTS or later, or other equivalent server operating system
- Web Server: Apache 2.4 or Nginx
- PHP Version: PHP 8.1 or later
- Database Server: MySQL 8.0 or MariaDB 10.5 or later
- PHP Dependency Manager: Composer 2.x
- JavaScript Runtime and Package Manager: Node.js 18.x and npm 9.x or later
- Front-End Build Tool: Vite-compatible environment
- Browser Support for Administration: Latest version of Google Chrome, Microsoft Edge, or Mozilla Firefox
- SSL Support: TLS/SSL certificate for secure HTTPS access
- Version Control: Git for source code management and deployment

Hardware Server Requirement Specifications:

- Processor: Intel Core i5 or equivalent quad-core processor
- Memory (RAM): 8 GB
- Storage: 256 GB SSD
- Network Interface: 1 Gbps Ethernet adapter
- Display Resolution for Administration: 1366 x 768
- Backup Device or Storage: External drive or network backup storage

Software Client Minimum Requirement Specifications:

- Operating System: Windows 10 or later, macOS 11 or later, or a current Linux desktop distribution

- Web Browser: Google Chrome, Microsoft Edge, or Mozilla Firefox, updated to a supported recent version
- Internet Browser Engine Support: HTML5, CSS3, and JavaScript enabled
- PDF Reader: Any standard PDF viewer for downloadable reports and documents
- Office Application: Microsoft Office, LibreOffice, or equivalent for viewing exported files
- Internet Connectivity Software: Stable internet connection with access to secure web browsing over HTTPS
- DSWD email Required for account-related notifications
-

Hardware Client Requirement Specifications:

- Processor: Intel Core i3 or equivalent dual-core processor
- Memory (RAM): 4 GB
- Storage: 128 GB available storage
- Display: 1366 x 768 screen resolution
- Network: Stable internet connection through Wi-Fi or LAN
- Input Devices: Standard keyboard and mouse or laptop touchpad

IV. Entity Relationship Diagram / Database Schema

Include Entity Relationship diagram / Database Schema

V. MANUAL

Installation Guide:

The installation process for STB Service Request consists of preparing the environment, installing backend and frontend dependencies, configuring the database, running migrations, building the application assets, and starting the server. Once these steps are completed, the system is ready for local development, testing, or deployment.

- Clone or copy the project source code into the target machine.
- Open a terminal in the project directory.
- Install PHP dependencies using Composer.
- Install JavaScript dependencies using npm.
- Create the application environment file by copying the example environment configuration.
- Generate the Laravel application key.
- Configure the database connection in the environment file.
- Run the database migrations.
- Create the storage link for uploaded files.
- Build or run the front-end assets.
- Start the Laravel application server.

Command Reference:

- composer install
- npm install
- copy .env.example .env
- php artisan key:generate
- php artisan migrate
- php artisan storage:link
- npm run build
- php artisan serve

VI. User Manual

STB Service Request System (STBSRS)

Requestor Guide (STB Service Request System)

Who can use this access

This access is intended for individuals, Local Government Units (LGUs), partner agencies, organizations, and other stakeholders requesting technical assistance or services from the Social Technology Bureau (STB). No system account is required to submit a request.

Main responsibilities

- Submit a service request by providing the required information.
- Verify the request using the One-Time Password (OTP) sent to the registered email address.
- Monitor the progress of the submitted ticket.
- Communicate with the assigned technical staff through the ticket conversation.
- Review the provided resolution and download any attached documents.
- Submit a satisfaction feedback after the request has been completed.

Creating a Service Request

1. Open the STB Service Request System (STBSRS).
2. Select Create New Service Request.
3. Enter the required User Information.
4. Complete the Request Information section.
5. Submit the request.
6. Enter the OTP sent to the registered email address.
7. Once verified, the system generates a unique Ticket Reference Number.

After Submission

- The request is successfully recorded in the system.
- A Ticket Reference Number is issued for tracking purposes.
- The request is forwarded to the Service Request Administrator for review.
- Email notifications are sent whenever the ticket status changes.

What a Requestor can do

- Create a new service request.
- Verify the request using OTP.
- Search and access ticket details using the Ticket Reference Number and email verification.
- View ticket status and request history.
- Exchange messages with the assigned technical staff.
- View and download the resolution and supporting attachments.
- Submit a satisfaction feedback report after the request is completed.

What a Requestor cannot do

- Modify or delete a submitted request once it has been processed.
- Assign tickets to technical staff.
- Change ticket status.
- View other requestors' tickets.
- Access administrative modules and reports.

Viewing Ticket Details

1. Open the STBSRS.
2. Select **Input Fields** Ticket number.
3. Enter the Ticket Reference Number.
4. Verify your identity through the OTP sent to your registered email.
5. View the complete ticket information, including:
 - Ticket status
 - Request details
 - Conversation with technical staff
 - Resolution
 - Resolution attachments
 - Satisfaction Feedback form (when available)

Submitting Satisfaction Feedback

1. Open the completed ticket.
2. Review the provided resolution.
3. Rate the service received.
4. Enter comments or suggestions.

5. Submit the feedback.

Important Notes

- OTP verification is required before accessing ticket details.
- The Ticket Reference Number should be kept for future tracking.
- Tickets that remain unanswered by the requestor for three (3) days after resolution are automatically closed by the system.

Expected Outcome

The requestor can successfully submit, monitor, communicate, receive resolutions, and evaluate the service provided through the STB Service Request System.

Service Request Administrator Guide (STBSRS)

Who can use this access

This access is intended for authorized STB personnel responsible for reviewing, assigning, processing, monitoring, and resolving service requests submitted through the STB Service Request System.

Main responsibilities

- Review newly submitted service requests.
- Acknowledge and validate request information.
- Monitor ticket progress.
- Communicate with requestors through the ticket conversation.
- Record the resolution.
- Upload resolution attachments.
- Update ticket status.
- Monitor dashboard analytics and feedback reports.

What a Service Request Administrator can do

- Log in using authorized credentials.
- View all submitted tickets.
- Review and validate requests.
- Assign technical staff.
- Update ticket status (Review, In Progress, Completed, Closed).
- Record the final resolution.
- Upload supporting documents.
- Respond to requestor inquiries.
- Access dashboard analytics.
- View Feedback Reports.
- Monitor all ticket activities.

Ticket Processing Workflow

1. Log in to the STBSRS.
2. Open the **Review Tickets** module.
3. Review the submitted request.
4. Verify the request information.

5. Update the ticket status to **In Progress**.
6. Coordinate with the requestor through the conversation module if additional information is required.
7. Record the final resolution.
8. Upload supporting documents.
9. Update the ticket status to **Completed**.
10. The system automatically notifies the requestor through email.

Managing Ticket Resolution

1. Open the ticket.
2. Complete the **Resolution** section.
3. Upload the necessary resolution attachments.
4. Save the resolution.
5. Mark the ticket as **Resolved**.

Monitoring Feedback Reports

1. Open the **Feedback Report** module.
2. Review satisfaction ratings.
3. Analyze comments and suggestions.
4. Monitor overall service quality trends.

Dashboard Monitoring

- Total service requests
- Requests by status
- Requests by service type
- Monthly ticket trends
- Resolution performance
- Overall system statistics

Important Notes

- Only authorized personnel may update ticket status.
- Resolution documents should be uploaded before completing a ticket.
- Requestors receive automatic email notifications whenever the ticket status changes.
- Completed tickets awaiting requestor feedback are automatically closed after three (3) days of inactivity.

Expected Outcome

The Service Request Administrator ensures that all service requests are properly reviewed, processed, resolved, documented, and monitored while maintaining efficient communication and timely service delivery.
